Work Experience

Software Development Engineer Intern

May 2025 - Present

73Strings (Goklound) Bengaluru

- Re-architected a high-scale financial calculation engine using **Java, Spring Boot, and PostgreSQL**, reducing API latency from **minutes** to under **one second** and scaling to **20K+ records**.
- Optimized backend performance **by eliminating N+1 queries and normalizing schemas**, resulting in a **40% increase** in system throughput and improved scalability.
- Implemented **Redis caching, version locking, and distributed job scheduling** to improve concurrency handling and system reliability in multi-tenant architecture.
- Accelerated **bulk transaction processing** by 5–8 times, reducing **100K record** upload time from **5–6 minutes to under 60 seconds**.

Freelance Software Engineer (AI Code Evaluation)

Aug 2024 - Apr 2025

Outlier AI (Remote)

- Audited **200+ AI-generated** code snippets in C++ and Java for **logic, security, and Big-O efficiency**, maintaining a 98% accuracy.
- Debugged and optimized code using **data structures and algorithms** to improve **edge case handling and performance**.

Summer Training

Jun 2024 - Jul 2024

Spruce by Hitbullseye.com at Lovely Professional University

- Developed a comprehensive **N-Queen visualizer project**, implementing **backtracking algorithms** to visualize solution.

Projects

Spot Bus (Real-Time Bus Tracking & ETA System) | Java, Spring Boot, PostgreSQL

Apr 2026 - Present

- Developing a real-time bus tracking system to provide **live location updates and ETA predictions**.
- Building scalable backend services using **Spring Boot and REST APIs** to handle location data and user requests.
- Improved real-time location throughput by **30%** by implementing a **Redis-based write-through cache** and refactoring PostgreSQL join queries to utilize **spatial indexing**.
- GitHub Repository Link: <https://github.com/ervg0203/SpotBus>

Shop Sphere (Ecommerce Website) | MERN Stack, Responsive Web Design

May 2024 - Mar 2025

- Implemented secure and scalable RESTful APIs using Node.js and Express.js to support CRUD operations, JWT-based authentication, pagination, and user-specific data management for a full-stack MERN e-commerce application.
- GitHub Repository Link: <https://github.com/ervg0203/ShopSphere>

Secure Docs (Confidential Document Storage App) | Android Studio, Kotlin

Mar 2024 - Apr 2025

- Android application that allows users to securely store confidential documents in the device's internal storage.
- GitHub Repository Link: <https://github.com/ervg0203/SecureDocsApplication>

Certificates

Introduction to Generative AI (Google Cloud) — Certificate Link

Jun 2024

Server-Side JavaScript with Node.js (NIIT) — Certificate Link

Mar 2024

Technical Skills

Languages: Java, C++, Python, JavaScript, Kotlin

Technologies & Frameworks: Spring Boot, Node.js, Express.js, React.js, JWT, MongoDB, PostgreSQL

Tools & Core Skills: Git, GitHub, IntelliJ IDEA, Data Structures & Algorithms, OOP, SQL, Problem Solving

Achievements

- Ranked **78th out of 20,000** participants in the **Geeks for Geeks MTS Hiring Contest**.
- Solved **500+ coding problems** across various platforms like Leet Code, Hacker Rank, Geeks for Geeks.
- Earned **15 Leet Code badges** demonstrate consistent proficiency in Data Structures and competitive problem solving.

Education

Lovely Professional University

2022 – 2026

Computer Science and Engineering — CGPA: 8.30

Jalandhar, Punjab
